A. Repetitive rating; pulse width limited by max. junction temperature.

B. P_d is based on max. junction temperature, using junction-case and junction-ambient thermal resistance.C. The value of R_{GJA} is measured with the device mounted on 1 in² FR-4 board with 2oz. Copper, in the still air environment with $T_A=25^\circ\text{C}$.The maximum allowed junction temperature of 150°C . The value in any given application depends on the user's specific board design.
