- A. Repetitive rating; pulse width limited by max. junction temperature.
- B. P_d is based on max. junction temperature, using junction-case thermal resistance.
- C. The value of $R_{\theta\text{JA}}$ is measured with the device mounted on 1 in² FR-4 board with 2oz. Copper, in the still air environment with $T_A = 25^\circ\text{C}$. The maximum allowed junction temperature of 150°C . The value in any given application depends on the user's specific board design.
